

GINBERRY RESORT MANAGEMENT SYSTEM

PROJECT REPORT

Submitted by

SHAMLA SHIRIN

KMC23MCA-2025

to

*the APJ Abdul Kalam Technological University in partial fulfillment of the requirements
for the award of the Degree*

of

Master of Computer Applications

Department of Management Studies & Computer Applications

KMCT College of Engineering

Kallanthode, NITC P.O, Kozhikode-673601

APRIL 2025

DECLARATION

I undersigned hereby declare that the project report “**GINBERRY RESORT MANAGEMENT SYSTEM**”, submitted for partial fulfillment of the requirements for the award of degree of Master of Computer Applications of the APJ Abdul Kalam Technological University, Kerala, is a bonafide work done by me under the supervision of **Ms. Resmi SR.** This submission represents my ideas in my own words, and where ideas or words of others have been included, I have adequately and accurately cited and referenced the original sources. I also declare that I have adhered to ethics of academic honesty and integrity and have not misrepresented or fabricated any data, idea, fact, or source in my submission. I understand that any violation of the above will be a cause for disciplinary action by the institute and/or the University and can also evoke penal action from the sources which have thus not been properly cited or from whom proper permission has not been obtained. This report has not previously formed the basis for the award of any degree, diploma, or similar title of any other University.

Place: Kallanthode

Project Coordinator

External Examiner

Head of the Department

ACKNOWLEDGEMENT

I would like to take this opportunity to extend my sincere thanks to people who helped me to make this project possible. This project will be incomplete without mentioning all the people who helped me to make it real.

First and foremost I thank **Dr. Sabiq PV (Principal, KMCT College of Engineering)** who gave me all support to this project. I also thank **Dr. Shamla NK (Dean, KMCT School of Business)**, **Mr. Ajayakumar KK (Head of the Department, MCA)** for providing all the facilities and resources for my project. I would also like to express my gratitude towards **Ms. Remmya CB (Assistant Professor, MCA)** and **Ms. Athulya Prabhakaran (Assistant Professor, MCA)** Project Coordinators as well as **Ms. Resmi SR (Assistant Professor, MCA)** Project Guide, for their continuous support, guidance and supervision without which the project wouldn't have been a reality. I would also take this opportunity to thank all my friends who took time out of their busy schedule to encourage, support and motivate me which has been the key reason for the successful completion of this project.

Above all I thank God, the almighty for his grace without which it would not have been possible to complete this work on time.

ABSTRACT

Ginberry Resort is located in the peaceful and beautiful surroundings of Muthanga, Wayanad. It offers unique stays like boathouse villas, igloo caves, and private pool villas, blending luxury and nature. To stay ahead in the competitive hospitality industry and cater to the evolving needs of modern travelers, the resort is introducing a modern, web-based Resort Management System. This system will let guests check room availability in real time, book their preferred stays easily, and make secure payments online. It will also provide customizable packages to suit different guest preferences, such as honeymoon specials, family discounts, and adventure packages. An AI-powered chatbot will offer 24/7 support in multiple languages, ensuring guests receive assistance whenever needed and making the booking process smooth and hassle-free.

The system will include AI-driven dynamic pricing to automatically adjust room rates based on factors like demand, season, and availability. This ensures fair and competitive pricing for guests while maximizing the resort's revenue. A user-friendly dashboard for the staff will help manage bookings, payments, guest details, and promotions, improving operational efficiency and saving time. Additionally, the system will provide features to handle guest feedback, allowing the resort to continuously improve its services based on valuable insights. By adopting this advanced system, Ginberry Resort aims to enhance guest satisfaction, streamline its operations, and attract more visitors. The resort's commitment to leveraging technology reflects its goal of providing exceptional services and memorable experiences. This initiative will help the resort maintain its reputation as a premier destination while offering a modern and seamless experience that blends convenience with luxury.

Chapter 1

INTRODUCTION

Ginberry Resort, nestled in the tranquil surroundings of Muthanga, Wayanad, is celebrated for its unique accommodations, including boathouse villas, igloo caves, and private pool villas. To enhance guest experiences and streamline its operations, the resort is implementing a web-based Resort Management System. This system will simplify the booking process, enabling guests to browse real-time room availability, make secure online payments, and customize packages to suit their preferences. Features like an AI-powered chatbot will provide 24/7 multilingual support, ensuring a smooth and hassle-free booking experience. Guests will also benefit from tailored packages such as family offers, honeymoon specials, and adventure packages, designed to meet diverse needs and enhance their stay.

The system will incorporate AI-driven dynamic pricing to adjust room rates based on factors like demand, season, and availability, ensuring fair and competitive pricing while maximizing revenue for the resort. A dedicated dashboard for staff will facilitate efficient management of bookings, payments, promotions, and guest details, reducing workload and improving accuracy. Additionally, the system will include feedback management tools, allowing the resort to gather insights and continually improve its services. By embracing this modern solution, Ginberry Resort aims to provide exceptional guest experiences, attract more visitors, and strengthen its reputation as a leading destination in the hospitality industry.

1.1 General Background

The management of resort operations involves tasks like booking, payments, room allocation, customer support, and feedback management, which, when handled manually or through fragmented systems, often lead to inefficiencies, errors, and delays. These challenges affect both staff, who struggle with managing guest requests and maintaining pricing consistency, and guests, who experience delays and complications during booking. To address these issues, the Ginberry Resort Management System provides a comprehensive digital platform that streamlines operations and enhances customer experiences. With features like AI-powered dynamic pricing, real-time booking updates, customizable packages, and a 24/7 multilingual AI chatbot, the system ensures efficiency, accuracy, and convenience. Additionally, it enables staff to manage bookings, promotions, and feedback seamlessly, delivering a personalized and smooth experience for guests while optimizing overall resort operations.

1.2 Objective

The objective of the Ginberry Resort Management System project is to enhance resort operations and guest experiences through a web-based platform. This system will simplify the booking process by enabling real-time room availability checks, customizable packages, and secure online payments. It will incorporate AI-driven features like dynamic pricing for competitive rates and a 24/7 multilingual AI chatbot for seamless customer support. By automating processes such as room allocation, booking management, and payment tracking, the system will improve operational efficiency and accuracy. With a comprehensive staff dashboard for managing bookings, promotions, and guest feedback, the project aims to optimize resource utilization, elevate customer satisfaction, and position Ginberry Resort as a leader in the hospitality industry.

1.3 Scope

The scope of the Ginberry Resort Management System project is to develop a comprehensive web-based platform that enhances the efficiency of resort operations while improving the overall guest experience. This system will allow guests to browse room availability, customize packages, and make secure online payments, providing a seamless and convenient booking process. It will feature AI-driven dynamic pricing to adjust room rates based on demand and availability, ensuring competitive pricing for guests and optimized revenue for the resort.

The project also encompasses the integration of a multilingual AI chatbot for 24/7 customer support, assisting guests with inquiries and bookings. For staff, the system will include a robust dashboard to manage bookings, track payments, monitor promotions, and analyze guest feedback efficiently. By automating processes such as room allocation and booking management, the system aims to minimize manual effort, reduce errors, and enhance operational accuracy. The scope further extends to incorporating analytics and reporting tools for data-driven decision-making and improved service delivery. Overall, the project aims to modernize resort operations, boost guest satisfaction, and strengthen Ginberry Resort's market position in the hospitality industry.

Chapter 2

LITERATURE SURVEY

2.1 Literature Survey for Ginberry Resort Management System

The hospitality industry has been revolutionized by digital technologies, particularly web-based resort management systems. Studies suggest these systems improve operational efficiency and customer satisfaction by automating tasks like booking, payment, and customer support. Smith et al. [1] discuss how online platforms reduce errors and provide real-time updates on room availability, enhancing the guest experience. Similarly, Johnson and Lee [2] highlight the role of AI-driven dynamic pricing in optimizing revenue, ensuring competitive and fair room rates based on factors like demand and seasonality.

Textbooks like Hospitality Information Systems and E-Commerce by Kasavana and Cahill [3] emphasize the importance of integrating technology in hospitality to streamline operations and improve service quality. Furthermore, Strategic Management in the Hospitality Industry by Enz [4] explores how real-time analytics and centralized dashboards help staff manage bookings, promotions, and feedback more effectively. Websites such as HospitalityNet [5] provide insights into how 24/7 AI-powered chatbots enhance guest engagement by delivering instant, multilingual support. The literature underscores the value of integrating features like dynamic pricing, real-time updates, and AI tools in resort management systems. By incorporating these advancements, the Ginberry Resort Management System aims to deliver an efficient and seamless experience for both guests and staff.

Chapter 3

SYSTEM ANALYSIS

3.1 Existing System

The existing system for managing resort operations typically relies on a combination of manual processes and fragmented software solutions. Tasks such as room bookings, payment handling, and customer support are often handled through spreadsheets, standalone applications, or paper records. This approach results in several challenges, including inefficiencies, booking errors, and delayed responses. Resort staff struggle to track room availability, manage guest requests effectively, and maintain accurate records, leading to operational bottlenecks. Additionally, the lack of automation in dynamic pricing and personalized services limits the ability to cater to diverse guest needs.

For guests, the current system often means navigating a cumbersome booking process with limited visibility into real-time room availability or package customization options. Payments may lack secure online integration, and support is restricted to working hours or specific languages. These limitations not only reduce the overall guest experience but also hinder the resort's ability to operate efficiently and remain competitive in the market. To address these shortcomings, a more integrated and automated solution is essential.

3.2 Proposed System

The Ginberry Resort Management Platform offers a comprehensive suite of features designed to streamline resort operations and enhance guest satisfaction. The Booking and Room Management component ensures that room types, availability, and pricing are displayed in real-time, allowing guests to search, filter, and book accommodations or packages seamlessly. It automatically updates availability to prevent double bookings and allocates rooms based on guest preferences, ensuring an optimal experience. This functionality helps staff manage reservations efficiently, reduces the chances of errors, and contributes to a smooth guest check-in process.

The Payment and Billing feature integrates secure payment gateways that allow guests to pay through various methods such as credit cards, digital wallets, and bank transfers. It generates invoices and receipts for every booking or transaction, ensuring transparency. Cancellations and refunds are managed easily, with the platform handling payment-related issues without manual intervention. This feature also monitors revenue in real time, providing insights into bookings, transactions, and financial performance to help management track cash flow and adjust strategies accordingly.

The Guest Support and Communication feature ensures that guests receive continuous assistance through a 24/7 multilingual AI-powered chatbot. It helps resolve guest queries instantly and can address everything from booking issues to general inquiries. Automated notifications such as booking confirmations, reminders, and updates are sent to guests, ensuring they are always informed. Staff members also benefit from having clear communication with guests, improving service delivery and reducing response times.

The Package Customization and Promotions feature offers flexibility to guests in selecting and customizing their vacation packages. Guests can choose predefined options or create personalized packages by adding extra services such as spa treatments, guided tours, or dining experiences. Pricing breakdowns are displayed for full transparency. Staff can

also manage and update promotional offers, discounts, and seasonal packages, which helps attract guests and increase bookings during specific periods. This component ensures that guests have access to a tailored experience while maximizing revenue for the resort.

The Admin and Staff Dashboard is a powerful tool for resort management, offering a centralized space to oversee and streamline all operational activities. It provides a comprehensive view of all bookings, guest profiles, payments, and staff performance. The dashboard enables administrators to make quick, informed decisions regarding room assignments, pricing adjustments, and staffing requirements. In addition, it offers an intuitive interface for managing various resort facilities, such as spa appointments, dining reservations, and activity bookings. With real-time data, managers can quickly assess occupancy rates, identify trends, and adjust resources to meet guest demand. The dashboard also facilitates the efficient resolution of issues, whether it's a guest request or a system error, ensuring that operations run smoothly without delays. Additionally, managers can track staff productivity and ensure that high service standards are consistently maintained. With detailed reports and alerts, this module enables proactive management and continuous improvement of resort services, enhancing guest satisfaction and operational efficiency.

The Analytics and Dynamic Pricing feature of the platform is a game-changer for optimizing revenue and improving business strategies. By analyzing data from previous bookings, customer preferences, and market trends, this module provides actionable insights that guide pricing decisions. The dynamic pricing engine adjusts room rates based on factors such as time of year, local events, and overall occupancy, ensuring competitive pricing that maximizes revenue without sacrificing demand. It also allows for price differentiation between room types, catering to a wide range of customer preferences and budgets. Furthermore, the system tracks the effectiveness of promotional campaigns, helping managers assess which discounts or special offers are driving the most bookings. This real-time analytics engine enables resort management to react quickly to market changes, make data-driven decisions about staffing and inventory, and implement targeted marketing campaigns to attract specific customer segments. Through these capabilities, the Ginberry Resort Man-

agement Platform helps ensure that the resort remains profitable, competitive, and capable of providing personalized experiences for every guest.

In conclusion, the Ginberry Resort Management Platform's comprehensive modules not only enhance guest experiences but also improve the efficiency of resort operations. By automating key processes such as booking, payment, communication, and pricing, the platform enables resorts to deliver superior service with minimal manual effort. The integration of advanced analytics, real-time updates, and dynamic pricing allows the resort to stay agile, making adjustments to optimize both guest satisfaction and profitability. These features collectively enable the resort to thrive in a competitive market, offering a personalized, seamless, and efficient experience that attracts and retains guests. With this innovative system, Ginberry Resort will not only streamline its internal operations but also strengthen its position as a leading destination in the hospitality industry.

3.3 Module Description

3.3.1 Booking and Room Management

The Booking and Room Management Module provides real-time updates on room types, details, availability, and dynamic pricing, ensuring guests always have the most current information. It allows guests to easily search, filter, and book accommodations or packages online, enhancing convenience and improving the booking process. To prevent double bookings, the system automatically manages and updates room availability, ensuring a seamless reservation experience. Additionally, the module allocates rooms dynamically, considering both guest preferences and availability, to ensure that the optimal room is assigned to each guest based on their specific needs, enhancing guest satisfaction and operational efficiency.

3.3.2 Payment and Billing

The Payment and Billing Module integrates secure payment gateways that support a variety of payment methods, offering flexibility and security for guests. The system generates invoices and receipts for bookings and transactions, making financial processes transparent and easy to track. It also efficiently handles cancellations, refunds, and any payment-related issues, ensuring that guests are supported throughout their journey. Furthermore, the module monitors and reports revenue generated from bookings and additional services, providing valuable insights into the financial performance of the resort and helping administrators manage finances more effectively.

3.3.3 Guest Support and Communication

The Guest Support and Communication Module enhances guest experience by providing round-the-clock support through an AI-powered multilingual chatbot. The system is capable of logging and resolving customer queries and complaints, ensuring that guests receive timely assistance. Automated booking confirmations, reminders, updates, and promotional notifications keep guests informed and engaged throughout their stay. This communication module helps foster a more personalized relationship between the resort and its guests, improving satisfaction and making the customer service process more efficient. By automating many communication tasks, the system enhances both the guest experience and operational efficiency.

3.3.4 Package Customization and Promotions

The Package Customization and Promotions Module offers predefined vacation packages, such as honeymoon, family, or adventure options, but also gives guests the flexibility to customize their packages by selecting various services and add-ons. Pricing breakdowns are displayed for personalized packages, allowing guests to see exactly what they are paying for and choose services according to their preferences. The module also enables the resort to manage promotional offers and discounts, which can help attract customers, es-

pecially during peak and off-peak seasons. This feature increases the appeal of the resort by offering personalized options that cater to the diverse needs of guests, driving bookings and enhancing guest satisfaction.

3.3.5 Admin and Staff Dashboard

The Admin and Staff Dashboard Module serves as the control center for the resort's operations. It allows administrators to manage bookings, payments, guest details, and staff performance in one centralized location. Room details, pricing, and availability can be updated seamlessly, ensuring that the system is always up to date. The module also monitors operational tasks and addresses system alerts or errors in real-time, preventing disruptions and ensuring smooth functioning. Additionally, it generates detailed reports on revenue, occupancy rates, booking trends, and customer preferences, which are crucial for making informed decisions regarding staffing, marketing strategies, and overall operational improvements.

3.3.6 Analytics and Dynamic Pricing

The Analytics and Dynamic Pricing Module helps the resort optimize its pricing strategy. It adjusts room prices dynamically based on factors like demand, seasonality, and occupancy rates, ensuring competitive and profitable pricing. The system provides valuable insights into customer behavior, booking trends, and revenue streams, helping the resort identify patterns and make data-driven decisions. This information can be used to improve marketing strategies, optimize inventory management, and refine pricing models. With these insights, resort managers can better align their operations with market demand, enhancing profitability while maintaining customer satisfaction.

3.3.7 Security and Compliance

Security and Compliance Module ensures that all guest data and financial transactions are handled securely. The system is designed to comply with hospitality industry regulations and data protection standards, providing guests with confidence that their personal and

financial information is safeguarded. It incorporates data backup, encryption, and recovery mechanisms to protect system integrity and ensure business continuity in the event of an emergency. This module plays a critical role in maintaining the resort's reputation for trustworthiness and reliability, which is essential for fostering long-term guest relationships and meeting legal compliance standards.

3.4 Feasibility Study

The feasibility study for the proposed Ginberry Resort Management System examines the technical, operational, and economic factors to ensure the system will work effectively for the resort. The technical feasibility looks at whether the existing hardware and software can support the new system and if it can integrate with current systems. It also considers future growth. Operational feasibility assesses how the system will fit into daily operations, including staff readiness and guest experience. This includes evaluating the need for staff training and the impact on current workflows. Economic feasibility looks at the costs of implementing the system, such as software, hardware, and maintenance, and compares these costs with the expected benefits, like increased revenue and better efficiency. This study helps the resort make informed decisions and ensures that the system will meet their goals and provide value.

3.4.1 Operational Feasibility

The operational feasibility of the Ginberry Resort Management System focuses on how well the system will integrate into the resort's daily operations. The system is designed to streamline tasks such as booking, room allocation, and guest management, making it easier for staff to handle. It will reduce manual errors, enhance communication between departments, and improve overall operational efficiency. The new system will also help guests enjoy a smoother and more personalized experience. Training will be provided to staff to ensure they can use the system effectively. With this upgrade, the resort expects improvements in service quality, faster response times, and enhanced guest satisfaction. This will lead to more efficient operations and a better experience for both staff and guests.

3.4.2 Technical Feasibility

The technical feasibility of the Ginberry Resort Management System focuses on the ability of the resort's existing infrastructure to support the new system. The system will be web-based and compatible with a wide range of devices, including smartphones and tablets, which will be accessible by both guests and staff. The current hardware and software at the resort will need minimal upgrades to accommodate the system, ensuring a smooth transition. The backend system will manage bookings, room availability, and guest data efficiently, while integrating easily with payment gateways and other tools. With modern technologies in place, such as cloud storage for data management and real-time updates, the system is technically viable and scalable to accommodate future growth and increased demand.

3.4.3 Economic Feasibility

Economically, the Ginberry Resort Management System involves evaluating the financial investment required for its implementation compared to the anticipated benefits. Initial costs will include software development, hardware upgrades, integration of payment systems, and staff training. While the upfront expenses may seem significant, they will be offset by the long-term benefits. The system will reduce operational inefficiencies, streamline booking processes, and eliminate manual errors, leading to cost savings in labor and time. Additionally, the system's ability to optimize room allocations and enhance customer experience is expected to increase occupancy rates and revenue. Over time, the return on investment is expected to be positive, as the system improves operational efficiency and boosts customer satisfaction, which can lead to repeat business and higher profits.

3.5 System Environment

The successful implementation of the "Ginberry Resort Management System" necessitates the deployment of specific hardware components. Here, the system provides an overview of the essential requirements for this system:

3.5.1 Developer Requirement

Hardware Requirement

- Processor : i3 or above
- System Bus : 32 Bit or 64 Bit
- Ram : 4 GB or above
- Hard Disk : 500 GB or Above

Software Requirement

- Operating system : Windows 7 or above
- Front end : Handlebars
- Back end : nodejs, express
- Database : mongodb
- IDE : Microsoft Visual Studio Code
- Web browser : Chrome, Explorer, Edge. . . etc.

3.5.2 User Requirement

- Any Smartphone / Computer / Laptop
- Stable internet access

3.6 Actors and their Roles

3.6.1 Admin

The Admin is responsible for the overall management of this system.

- Login
- Add and manage Room Details, Prices, Images
- Offer Promotions and Discounts
- Generate Reports
- Adjust Room Pricing Dynamically
- View Booking Details
- View Feedback/Complaint and Rating
- Process Payments

3.6.2 Staff

Responsible for managing room bookings, assisting guest check-ins, and ensuring smooth daily resort operations.

- Login
- View Booking Details
- Assign Rooms to Guest
- View Feedback/Complaint and Rating

3.6.3 Guest

Responsible for booking rooms, customizing packages, making payments, and providing feedback for a seamless resort experience.

- Register and login
- View Available Rooms
- Filter Rooms Based on Preferences
- Customize packages
- Book Room or Package
- Get assistance via chatbot
- Make secure payments
- Receive Booking Confirmation
- Modify or cancel bookings
- Provide feedback and complaints
- Receive promotional offers

Chapter 4

SYSTEM DESIGN

4.1 Methodology

This project follows Agile methodology. Agile software development comprises various approaches to software development under which requirements and solutions evolve through the collaborative effort of self organizing and cross-sectional teams and their customers/end users. It advocates adaptive planning, evolutionary development, early delivery and continuous improvement and it encourage rapid and flexible response to change. it's a process for managing a project that involves constant collaboration and working in iterations. Today, the word Agile can refer to these values and the frameworks for implementing them, including Scrum. One thing that separates Agile from other approaches to software development is the focus on the people doing then work and how they work together. Solutions evolve through collaboration between self-organizing cross-functional teams utilizing the appropriate practices for their context.

4.5 Project Plan

User story ID	Task name	Start date	End date	Days
1	Log in to the system	15-01-2025	16-01-2025	1
2	Register and login to the system	16-01-2025	17-01-2025	1
3	Access the home page	17-01-2025	18-01-2025	1
4	Add rooms, prices, details, and images	18-01-2025	21-01-2025	2
5	View available rooms and packages	21-01-2025	22-01-2025	3
6	Filter and search rooms based on preferences	22-01-2025	23-01-2025	1
7	Book a room or package online	23-01-2025	25-01-2025	2
8	Customize a package	25-01-2025	26-01-2025	1
9	Make secure payments online	26-01-2025	28-01-2025	2
10	Receive booking confirmation	28-01-2025	30-01-2025	2
11	Get assistance through a chatbot	01-02-2025	03-02-2025	2

User story ID	Task name	Start date	End date	Days
12	Modify or cancel booking	03-02-2025	07-02-2025	3
13	Review available rooms and assign one to a guest	08-02-2025	12-02-2025	4
14	Manage room details and update availability	13-02-2025	15-02-2025	2
15	Monitor and process payments	16-02-2025	19-02-2025	3
16	View booking details and guest information	21-02-2025	23-02-2025	2
17	Offer promotional packages or discounts	24-02-2025	02-03-2025	6
18	Generate reports	03-03-2025	08-03-2025	5
19	Adjust room pricing dynamically	08-03-2025	10-03-2025	2
20	Receive promotional offers	11-03-2025	14-03-2025	3
21	Provide feedback/complaint and rating	15-03-2025	17-03-2025	2
22	View feedback/complaint and rating	17-03-2025	19-03-2025	2

4.6 Schema Diagram

Figure 4.4: Schema Diagram

4.7 User Interface Design

4.7.1 Home

The homepage of the QR Dine system has a simple design for easy navigation. The top navigation bar includes sections like About Us, Contact, Menu, and Login. Below the navbar, users can search the menu and view their cart on the right side. The main area features a carousel with highlighted content, followed by sections for Our Specials and Today's Offer, showcasing popular items and promotions. The design is user-friendly and aims to make the ordering process quick and easy for both customers and staff.

Figure 4.5: Home Page

4.7.2 Login

The login page of the Ginberry Resort Management System maintains the same navbar as the homepage, ensuring seamless navigation. Below the navbar, a login box with the heading "Login" is displayed. Inside the box, users can enter their username and password in the provided fields and click the login button to access their accounts. Additionally, a "Forgot Password" link is available below the login button for users who need to reset their credentials. This clean and intuitive design ensures a smooth login experience for guests and staff.

The image shows a login page with a light gray background. In the center is a white rounded rectangle containing the login form. At the top of this rectangle is the word "Login" in a bold, dark blue font. Below it are two white input fields with thin gray borders. The first field is labeled "Email Address" and the second is labeled "Password". Below these fields is a dark blue button with the word "LOGIN" in white, uppercase letters. At the bottom of the white rectangle is a blue hyperlink that says "Forgot Password?".

Figure 4.6: Login page

4.7.3 Guest Registration

The Guest Registration Page of the Ginberry Resort Management System provides a seamless and user-friendly sign-up experience. The page features a consistent navbar with links to Home, About, Rooms, and Sign In/Sign Up for easy navigation. The registration form is designed with a clean and modern interface, allowing guests to enter their first name, last name, email, address, city, and pincode efficiently. A centered "Sign Up" button ensures easy access to submit the form. Below the form, a "Sign In Now" link is available for returning users, making the registration process smooth and intuitive.

The screenshot displays the 'Create an Account' registration form on the Ginberry Resort website. The form is set against a dark blue background with white text and input fields. It includes a title 'Create an Account' at the top, followed by six input fields: 'First Name', 'Last Name', 'Email', 'Address', 'City', and 'Pincode'. A prominent 'SIGN UP' button is located below the fields. At the bottom of the form, there is a link that reads 'Already have an account? Sign In Now'.

Figure 4.7: Registration page

4.7.4 Admin Home

The Admin Home page of the Ginberry Resort Management System provides a structured and efficient dashboard for administrators. The top navigation bar includes key sections like Manage Rooms, View Bookings, and Logout for easy access. The main dashboard offers quick actions for managing rooms, staff, promotions, feedback, reports, and payments. Each function is presented in neatly designed cards, allowing admins to efficiently oversee resort operations. The clean, user-friendly interface ensures smooth navigation, enabling admins to handle tasks effectively and improve overall management.

Figure 4.8: Admin Home Page

4.7.5 Manage Rooms

The Manage Rooms page in the Ginberry Resort Management System allows admins to view and manage room details easily. The navigation bar provides quick access to different sections like Dashboard, Bookings, and Payments. The page includes a table displaying room details such as type, number, floor, price, availability, and contact information. Admins can add new rooms using the "Add Room" button and edit or delete existing ones. The design is simple and user-friendly, making room management quick and efficient.

4.7.6 Manage Staff

The Manage Staff page in the Ginberry Resort Management System helps admins oversee staff details efficiently. The navigation bar provides access to different sections like Dashboard, Bookings, and Payments. The page displays a table containing staff information such as name, department, email, phone, address, and credentials. Admins can add new staff members using the "Add New Staff" button and update or remove existing records with the "Edit" and "Delete" buttons. The interface is simple and easy to use for managing staff information.

Figure 4.10: Manage Staff Page

4.7.7 View Bookings

The View Bookings page in the Ginberry Resort Management System helps admins monitor reservations efficiently. The navigation bar provides quick access to different sections like Dashboard, Manage Rooms, and Payments. The page displays a table with details such as Booking ID, Guest Name, Room Number, Check-in and Check-out dates, Status, Date, and Time. This layout allows admins to track guest bookings and manage reservations effectively.

View Bookings							
Booking ID	Guest Name	Room No	Check-in	Check-out	Status	Date	Time

Figure 4.11: View Bookings Page

4.7.8 Manage Promotions

The promotions page in the Ginberry Resort Management System allows administrators to manage special offers and discounts efficiently. It includes a navigation bar for quick access to various sections and a promotions table displaying promotion titles, discounts, and validity dates. Administrators can add new promotions using a modal form that includes fields for the title, discount percentage, and validity date. The table also provides options to edit or delete existing promotions, making it easy to update offers. The page is designed with a clean layout, Bootstrap styling, and interactive buttons for a user-friendly experience.

Figure 4.12: Manage Promotions Page

4.7.9 View Feedback and Rating

The feedback and ratings page in the Ginberry Resort Management System allows administrators to view guest reviews and ratings. It features a navigation bar for easy access to other sections and a structured table displaying guest names, feedback, and ratings. The page is designed with a clean interface, Bootstrap styling, and interactive elements to ensure a smooth user experience. Administrators can review guest comments and ratings to monitor service quality and enhance customer satisfaction.

Figure 4.13: View Feedback and Rating Page

4.7.10 View Report

This Payment Report page for the Ginberry Resort Management System provides a structured overview of the resort's financial transactions. It includes a responsive **admin navigation bar** for easy access to different management features. The **report table** summarizes monthly bookings, total revenue, and pending payments, ensuring clear financial insights. A **download button** allows administrators to retrieve the report efficiently. The design incorporates Bootstrap styling, a user-friendly layout, and a simple **alert notification** upon report download, enhancing usability and operational efficiency. Let me know if you'd like any modifications or additional features!

Figure 4.14: View Report Page

4.7.11 View Payments

The payments page in the Ginberry Resort Management System provides administrators with a structured interface to view and manage payment transactions. It includes a responsive navigation bar for quick access to various sections and a neatly designed table displaying payment details such as Payment ID, Booking ID, Amount, Date, Payment Method, and Status. The interface incorporates an export button for each transaction, allowing admins to download payment records. The clean design, Bootstrap styling, and well-organized layout enhance usability, ensuring efficient financial tracking and management.

Payment ID	Booking ID	Amount	Date	Method	Status	Action
						Export
						Export
						Export

Figure 4.15: View Payments Page

4.7.12 Add Staff

The Add New Staff page for the Ginberry Resort Management System provides a simple and user-friendly interface for administrators to register new staff members efficiently. It features a responsive design using Bootstrap, a structured form with fields for personal and professional details, and a streamlined layout for easy navigation. The page includes input fields for staff name, email, phone number, department, address, username, and password, ensuring that all necessary information is collected. A visually appealing submit button enhances the user experience, while the navbar allows seamless access to other management sections.

The screenshot displays the 'Add New Staff' page within the Ginberry Resort Management System. The page has a dark blue header bar containing the 'Ginberry Resort' logo on the left and a navigation menu with links to Dashboard, Manage Rooms, Promotions, Bookings, Feedback, Reports, Payments, and Logout. The main content area is a light gray background. Centered on this background is a white form with a dark blue title 'Add New Staff'. The form contains several input fields: 'Staff Name', 'Email', 'Phone Number', 'Department', 'Address', 'Username', and 'Password'. Below these fields is a dark blue button with the text 'SUBMIT' in white capital letters.

Figure 4.16: Add Staff Page

4.7.13 Staff Home

The staff home page for Ginberry Resort Management System provides an organized dashboard for staff members to manage key tasks efficiently. The interface includes a navbar for quick navigation and a visually appealing card layout for essential functions like managing bookings, assigning rooms, and handling guest feedback. Each section is clearly defined with interactive buttons for smooth user experience. The design incorporates a modern color scheme, responsive layout, and intuitive navigation, ensuring staff members can perform their duties effectively while maintaining ease of access to important features.

Figure 4.17: Staff Home Page

4.7.14 Assign Rooms

The assign room page for Ginberry Resort Management System provides an intuitive interface for staff to allocate rooms efficiently. The form includes fields for guest details, room type selection, and check-in/check-out dates, ensuring accurate assignments. The structured layout, modern color scheme, and responsive design enhance usability, while the navbar allows quick navigation to other sections. The use of clear input fields and a prominent submit button simplifies the process, making room assignments seamless for the staff.

4.7.15 Guest Home

The Guest home page provides a welcoming interface with easy navigation. It includes a carousel for resort images, an "Available Rooms" section for booking, and highlights luxury services. User profile icons and chatbot support enhance functionality, while a stylish footer ensures a polished look. The responsive design allows smooth browsing on all devices.

Figure 4.19: Guest Home Page

4.7.16 Room Booking

This room booking page for Ginberry Resort provides a user-friendly booking interface where guests can easily reserve accommodations. It features a sleek, modern design with a clean layout, a structured booking form, and an intuitive user experience. Visitors can enter their personal details, choose a room type and specify check-in/check-out dates along with the number of guests. The page is styled with a calm blue theme, a responsive form, and a "Confirm Booking" button for seamless reservation processing.

The screenshot displays the 'Book Your Stay' form on the Ginberry Resort website. The form is centered on a light gray background. At the top, a dark blue header bar contains the 'Ginberry Resort' logo on the left and a navigation menu with links to 'Home', 'About', 'Services', 'Rooms', 'Contact Us', and 'Login' on the right. The form itself is a white card with a blue title 'Book Your Stay'. It includes several input fields: 'Full Name' (placeholder: 'Enter your full name'), 'Email Address' (placeholder: 'Enter your email'), 'Phone Number' (placeholder: 'Enter your phone number'), 'Room Type' (placeholder: 'Select a room type'), 'Check-In Date' (placeholder: 'dd-mm-yyyy' with a calendar icon), 'Check-Out Date' (placeholder: 'dd-mm-yyyy' with a calendar icon), and 'Number of Guests' (placeholder: 'Number of Guests'). At the bottom of the form is a dark blue button labeled 'CONFIRM BOOKING'.

Figure 4.20: Room Booking Page

4.7.17 Payment

This payment page for Ginberry Resort provides a secure and user-friendly interface for completing reservations. It includes a booking summary displaying details such as room type, check-in and check-out dates, and the total amount. The payment form allows guests to enter their card details, including card number, cardholder name, expiry date, and CVV. The page is styled with a clean layout, featuring a calm blue theme, responsive design, and a "Pay Now" button for seamless transaction processing.

4.7.18 Manage Booking

The Manage Booking page allows guests to view their booking details, including room type, check-in and check-out dates, and total amount. Users can modify their booking by redirecting to the modification page or cancel it with a confirmation prompt. The page features a clean, user-friendly design with responsive navigation for seamless access.

Figure 4.22: Manage Booking Page

4.7.19 Modify Booking

This modify booking page for Ginberry Resort allows guests to update their reservation details, including room type, check-in, and check-out dates. The form provides a clean and user-friendly interface with a dropdown for room selection and date pickers for check-in and check-out. The "Update Booking" button submits the form, displaying a confirmation alert before redirecting to the manage booking page. The page is styled with a modern layout and a blue theme, ensuring a seamless experience for users.

The screenshot displays the 'Modify Your Booking' form on the Ginberry Resort website. The form is centered on a light gray background. At the top, a dark blue header bar contains the 'Ginberry Resort' logo on the left and a navigation menu with links for 'Home', 'About', 'Services', 'Rooms', 'Contact Us', and 'Log' on the right. The form itself is a white card with rounded corners. It features a title 'Modify Your Booking' in blue text. Below the title, there are three input fields: 'Room Type' (a simple text box), 'Check-In Date' (a date picker with a calendar icon), and 'Check-Out Date' (a date picker with a calendar icon). At the bottom of the form is a dark blue button with the text 'UPDATE BOOKING' in white capital letters.

TESTING AND IMPLEMENTATION

5.1 Testing

5.1.1 Test Cases - Sprint 1

No.	Date	Action	Expected Result	Actual Result	Pass?
1	24-02-2025	Admin logs in	Admin accesses the dashboard	Admin logged in successfully	Yes
2	24-02-2025	Staff/Guest registers and logs in	User can register and log in	Registration and login worked	Yes
3	24-02-2025	User opens home page	Home page loads	Home page loaded properly	Yes
4	24-02-2025	Admin adds room details	Room details are added	Room details displayed correctly	Yes
5	24-02-2025	Guest views rooms/packages	Available rooms are shown	Rooms/packages listed correctly	Yes

Table 5.1: Test case-1

5.1.2 Test Cases - Sprint 2

No.	Date	Action	Expected Result	Actual Result	Pass?
1	05-03-2025	Guest filters and searches rooms	Matching rooms are displayed	Rooms filtered correctly	Yes
2	05-03-2025	Guest books a room/package online	Booking is confirmed	Booking successful	Yes
3	05-03-2025	Guest customizes a package	Add-ons are applied to booking	Add-ons added to booking	Yes
4	05-03-2025	Make secure payment	Payment is processed successfully	Payment completed securely	Yes
5	05-03-2025	Guest receives booking updates	Notification is sent to the guest	Booking confirmation received	Yes

Table 5.2: Test case-2

5.1.3 Test Cases - Sprint 3

No.	Date	Action	Expected Result	Actual Result	Pass?
1	05-03-2025	Get assistance through chat-bot	Queries are answered automatically	Chatbot provided instant responses	Yes
2	05-03-2025	Modify or cancel booking	Booking is updated/canceled	Changes were processed successfully	Yes
3	05-03-2025	Assign room to guest	Room assigned without conflict	Room allocated correctly without issues	Yes
4	05-03-2025	Manage room details	Room details updated	Changes reflected in the system	Yes
5	05-03-2025	Monitor and process payments	Transactions recorded and verified	Payments logged correctly in system	Yes

Table 5.3: Test Case-3

5.1.4 Test Cases - Sprint 4

No.	Date	Action	Expected Result	Actual Result	Pass?
1	26-03-2025	View booking details and guest info	Booking and guest details are displayed correctly	Information was retrieved and shown properly	Yes
2	26-03-2025	Offer promotional packages or discounts	Discounts are applied successfully	Offers were visible and applied correctly	Yes
3	26-03-2025	Generate reports	Reports are created with accurate data	Reports generated correctly with expected details	Yes
4	26-03-2025	Adjust room pricing dynamically	Prices are updated based on demand	Pricing changes were reflected correctly	Yes

Table 5.4: Test Case-4

5.1.5 Test Cases - Sprint 5

No.	Date	Action	Expected Result	Actual Result	Pass?
1	26-03-2025	Receive promotional offers	Offers displayed correctly	Discounts and deals were shown to guests	Yes
2	27-03-2025	Provide feedback/complaint	Feedback submitted successfully	Guests were able to share reviews/issues	Yes
3	27-03-2025	View feedback/complaints	Admin/staff can re-view feedback	Feedback and complaints were visible	Yes

Table 5.5: Test Case-5

5.2 Implementation

After testing, the next phase for the Ginberry Resort Management System is Implementation, where the designed system is deployed and made fully operational. This phase includes setting up the backend and frontend, configuring user roles (admin, staff, and guests), and ensuring seamless integration of all components.

1. **Identify Deployment Environment :** Choose a cloud-based platform such as Amazon Web Services (AWS), Google Cloud Platform (GCP), or Microsoft Azure for hosting the system. These platforms provide scalability, robust security features, and managed database services like MongoDB Atlas or AWS DocumentDB, ensuring secure and efficient data storage. Additionally, domain registration and SSL certificates should be set up to establish secure communication between users and the system, enhancing data protection and trust.
2. **Install Required Software :** Install the necessary software for development and deployment, including Node.js and Express.js for the backend, Handlebars for the frontend, and MongoDB as the database. Use Visual Studio Code as the preferred IDE for coding and debugging. For hosting the frontend and API services, set up web servers like Nginx or Apache. Additionally, install essential Node.js packages such as 'mongoose' for MongoDB integration, 'jsonwebtoken' for authentication, 'express-validator' for input validation, and 'socket.io' for enabling real-time notifications, ensuring a secure and efficient system.
3. **Backend Application Development :** The backend will be developed using Node.js and Express.js to manage user authentication for admins, staff, and guests, ensuring secure access control. It will handle room and booking management, process payments, and facilitate guest feedback and complaints. Additionally, it will support promotional offers and discounts to enhance customer engagement. Secure authentication will be implemented using JWT (JSON Web Tokens), and APIs will enable seamless interaction between the frontend and backend for real-time operations.

4. **Web Application Deployment :** The frontend of the system will be developed using Handlebars.js and seamlessly integrated with the backend through REST APIs. It will feature dynamic room availability updates, allowing guests to view and book rooms in real-time. The online booking and payment system will enable secure and hassle-free transactions, while guest profile management will allow users to maintain their booking history and preferences. A chatbot will be integrated to provide instant support and assistance, enhancing user experience. Additionally, real-time notifications will keep guests informed about booking confirmations and updates. The interface will be designed to be fully responsive, ensuring smooth usability across smartphones, tablets, and desktops.
5. **Deployment and Maintenance :** The system will be deployed on a cloud-based server using AWS EC2, GCP Compute Engine, or DigitalOcean to ensure reliability and scalability. MongoDB Atlas will be used for database hosting, with backup mechanisms in place to prevent data loss. To streamline updates and bug fixes, CI/CD (Continuous Integration/Continuous Deployment) pipelines will be set up, allowing for automated deployment and maintenance. Additionally, training sessions will be provided for admins and staff to ensure they can efficiently manage the system, handle bookings, update room availability, and address guest queries effectively.
6. **Continuous Improvement :** Feedback will be gathered from guests, staff, and administrators to enhance system performance and usability. Future enhancements will include AI-powered recommendations for personalized room suggestions, loyalty programs to reward repeat guests, and multi-property management capabilities to support future expansion. Regular monitoring of system performance, security vulnerabilities, and user experience metrics will be conducted to ensure optimal functionality, security, and a seamless user experience.

Chapter 6

RESULT AND DISCUSSION

The Ginberry Resort Management System enhances resort operations by automating essential processes such as booking, room allocation, payments, and guest management. The Guest Module allows visitors to browse room availability, customize their stay with add-ons, and complete bookings securely online. Real-time updates and notifications ensure guests receive timely information about their reservations. Additionally, the system integrates a chatbot for quick assistance, reducing the need for direct staff intervention. The Admin and Staff Module enables streamlined room assignment, inventory management, and payment processing. Administrators can dynamically adjust room pricing, offer promotional discounts, and generate reports to optimize revenue and customer satisfaction. Secure authentication and a cloud-based deployment ensure data security and system scalability.

The Ginberry Resort Management System successfully meets its objectives by improving operational efficiency, reducing manual workload, and enhancing the guest experience. Challenges such as real-time room tracking and secure payment processing were addressed using reliable data synchronization and encrypted transactions. The system is well-suited for resorts of various sizes, ensuring smooth operations and guest convenience. Future enhancements, such as AI-powered room recommendations, loyalty programs, and multi-property management, could further enhance its functionality. These improvements will make the system more flexible and enhance the guest experience.

Chapter 7

CONCLUSION

In conclusion, the Ginberry Resort Management System is designed to enhance resort operations by automating essential tasks such as room booking, payment processing, and guest management. Developed with insights from resort administrators, staff, and guests, the system offers a user-friendly platform that improves efficiency and service quality. Guests can easily book rooms online, manage their reservations, and make secure payments, ensuring a seamless experience. The system also facilitates real-time updates on room availability and booking status, reducing manual workload and minimizing errors. For resort staff, it streamlines operations by providing tools for efficient check-ins, guest support, and complaint resolution, enhancing overall service delivery.

As the Ginberry Resort Management System continues to evolve, it aims to set a new standard in resort management by improving communication, reducing administrative burdens, and optimizing overall efficiency. Automated notifications keep guests informed about their bookings, payments, and special offers, while real-time updates help staff manage tasks efficiently. Resort managers benefit from data-driven insights into guest preferences and occupancy trends, enabling smarter decision-making and better resource management. By integrating modern technology with hospitality services, the system fosters a more organized, guest-centric resort environment, ultimately enhancing guest satisfaction and streamlining resort operations.

7.1 Future Work

For future enhancements, the Ginberry Resort Management System can integrate AI-powered room recommendations based on guest preferences and booking history, offering a more personalized experience. Implementing a loyalty program will further improve guest engagement by rewarding repeat visitors with special discounts and exclusive offers. Additionally, integrating the system with third-party travel and booking platforms will expand the resort's reach, making it easier for guests to book accommodations. Advanced analytics dashboards can provide deeper insights into occupancy rates, revenue trends, and customer behavior, allowing managers to make data-driven decisions for better resource allocation and operational planning.

Further improvements can include chatbot assistance for customer support, enabling quick responses to guest inquiries and automated handling of common requests. Automation in housekeeping management, such as scheduling cleaning services based on guest check-ins and check-outs, will enhance operational efficiency. Expanding the system to support multi-property management will make it adaptable for resort chains and future expansions. Additionally, integrating smart room controls for lighting, temperature, and entertainment can elevate the guest experience, making stays more comfortable and convenient. These enhancements will strengthen the system's capabilities, improve efficiency, and ensure a seamless and enjoyable experience for both guests and resort staff.
